

A powerful tool for any enterprise

ViaNet software makes it fast and easy for organizations of all types to harness the true power of their identity information.

Corporate

Build a digital image database for security staff to verify identities and confirm authorizations. Compile personnel information, online directories and product specifications.

Education

Retrieve digital student photos, emergency contact information, medical data and other critical student information. Print rosters for teachers, field trips and bus routes.

Criminal justice

Store crisp, digitized mugshots and images of inmate tattoos, scars or other identifiable marks. Track parolee schedules.

Clubs and associations

Track membership demographics and expiration dates. Verify identities at the point of entry. Simplify membership application, card issuance and card reissuance.

Multi-national enterprises

Application can be localized in one of many languages—including French, Spanish, Japanese, Portuguese and more.

From the world leader in identification systems

Datacard Group offers the industry's broadest, best-selling portfolio of fully integrated ID systems, software, card printers and accessories. Experienced security professionals insist on the Datacard brand because our solutions offer unparalleled reliability, productivity and ease-of-use—backed by world-class service and support in more than 120 countries.

Datacard®

Instantly access your databases anywhere via the Internet

ViaNet®

Identity Information Software

Maximize your identity information

A wealth of information resides throughout your enterprise—images and data that can help you operate safer, smarter and more profitably. With a simple Internet connection, Datacard® ViaNet® identity information software gives authorized users at any location immediate access to all this information.

Imagine the possibilities. Operators can capture images from one location and access a database in another. Or send all card issuance jobs to a central production facility for the ultimate in security. With ViaNet software, all your identity information is just a few simple mouse clicks away.

Internet-based design lets you access information anytime, anywhere

ViaNet software allows you to use virtually any Internet-enabled device from any location—including customer sites, satellite offices, hotels or home—to find the information you need. And you can add new users and new functions while placing minimal burden on your staff, because there is no need for personnel to visit individual workstations with diskettes, CDs or other storage media.

Choose from five software solutions

The ViaNet software portfolio includes Internet-based software packages for data retrieval, image capture, card issuance and reporting, plus a Personal Server version that applies the features of the other packages to a stand-alone workstation.

Data Retrieval

Instantly retrieve identity information

Find, retrieve and synthesize data and images stored in multiple databases and locations.

- Internet and intranet compatibility
- ODBC compliant
- Multi-level, password-protected security
- Novell® Directory Services® enabled

Image Capture

Send captured images to remote locations

Capture images from any location using a standard Internet browser, and send them via the Internet to a central, secure facility housing all your card printers.

- Supports JPEG, GIF and WMF image formats
- Display multiple images per record
- Store images as Binary Large Objects (BLOBs)
- Compatible with industry-leading image capture devices

Card Issuance

Produce secure photo IDs from anywhere

Instantly issue cards from any location over the Internet. Store images, application formats and card formats in a central server for fast, secure access.

- Compatible with ID Works® identification software
- Compatible with industry-leading card printers
- Local or central issuance options
- Secure card formats protect your digital assets

Reporting

Create powerful identity reports using a standard Internet browser

Users can combine information from multiple sources into a single, easy-to-understand format.

- Query multiple databases
- Create intuitive image directories and rosters
- Easy-to-use interface
- Define and format reports to fit the needs of your enterprise

Personal Server

Value-priced solution for the stand-alone PC

Combines the features of ViaNet data retrieval, image capture and card issuance packages for a powerful, value-priced identification software solution for individual workstation PCs.

- Retrieve data and images, update records from local databases
- Microsoft® Personal Server-based
- ODBC compliant
- Compatible with industry-leading card printers and image capture devices
